

ABSTRACT

A mini card adapter for removably holding and fixing a mini card in a secure manner is provided. The mini card adapter holds a mini card having the same thickness as the standard card and outline dimensions smaller than those of the standard card. The mini card comprises a reference wall 8 having the same thickness as the standard card and a bulging section 9 formed on the top surface of the reference wall 8. In the reference wall 8, a card pocket 10 for is formed for loading therein the mini card 1. The land section 9 is formed in a region Z corresponding to the emboss section of the standard card, and a part of the land section 9 bulges over the card pocket 10. As a result, an eaves wall 15 for supporting one side of the mini card 1 is formed. The eaves wall 15 has a boss 16 which fits in a hole 3 formed in the mini card 1. A receiving nail 17 for receiving the periphery of the mini card 1 in corporation with the eaves wall 15 is provided on the peripheral lower surface of the card pocket 10.
